

Colors

VERSA-LOK® Retaining Wall Systems have earned approval from landscape architects, engineers, and contractors. They provide unlimited design flexibility, unsurpassed durability, and fast, mortarless installation. The systems are ideal for all residential, commercial, and agency projects and are routinely specified by state transportation departments and the U. S. Army Corps of Engineers.

VERSA-LOK® units are available in six attractive colors. Colors are consistent throughout the entire units which are manufactured from high-strength, low-absorption concrete to exceed industry standards. Because units are integrally colored, they may be split and modified to create an unlimited variety of design elements without loss of color. In addition, color cannot chip or peel - providing a lifetime of virtually maintenance-free performance.

**COLORS displayed on this sheet may differ from actual colors due to printing reproduction limitations and variances in production runs. For a truer representation of color, please contact your VERSA-LOK® dealer.*
